

# Elevate Your Data Resilience with Fully-Managed Advanced Data Storage & Disaster Recovery Solutions

Empowering You with Enterprise-Grade Protection, Rapid Recovery, and Seamless Continuity

Hybrid & Multi-Cloud Ready

Security & Compliance

Business Continuity

## Why Choose Us for Data Storage, Backup & Disaster Recovery?

Modern organizations depend on uninterrupted access to data and applications. At Acrisure Cyber Services (ACS), we deliver unified, next-generation data storage and disaster recovery services—engineered for technical teams who demand uncompromising security, performance, and agility.

### Unified Backup & Recovery

Centralized protection for endpoints, servers, VMs, cloud workloads, and SaaS (M365, Google, Salesforce)—across on-prem and cloud.

### Dual, US-Based, Geo-Diverse Tier 3 Data Centers

Data is securely stored and replicated across two highly available, geographically separated facilities.

### Continuous Data Protection

Near real-time replication with customizable RPO/RTO for critical workloads.

### Flexible Restore Options

Restore to your site or instantly to the ACS DR cloud, with private cloud VM and physical server recovery.

### Immutable & Isolated Backups

Air-gapped, ransomware-resistant backups scanned for malware before restoration.

### Instant Data Access

Recover files, databases, or full systems directly from backup with near-zero downtime.

### Flexible Retention Schedules

Tailored policies (e.g., 60 daily, 84 monthly backups) to meet compliance and business needs.

### SOC 2 Type 2 Certified

Independently audited for security, availability, and confidentiality.

### End-to-End Automation

Automated scheduling, versioning, retention, and recovery workflows.

### White Glove, Fully Managed Service

Proactive backup monitoring, expert support, and managed data restores

### Flexible Network Access & 24x7x365 Availability

Secure, adaptable network options and round-the-clock access to your data.

**Partner with ACS for the most robust, flexible, and secure data storage & disaster recovery platform—engineered for IT leaders who demand resilience without compromise.**
